

Mini Self-Check

1. Which 3 commands save you the most time right now and why?

- `ls` – quickly shows files and directories.
 - `ps` – helps check running processes.
 - `systemctl status` – shows if a service is running or not.
-

2. How do you check if a service is healthy?

Commands I run:

```
systemctl status nginx  
ps aux | grep nginx  
journalctl -u nginx
```

These commands show service status, running processes, and logs.

3. How do you safely change ownership and permissions?

Example:

```
sudo chown user:user file.txt  
chmod 644 file.txt
```

This changes the owner and sets safe file permissions.

4. What will you focus on improving in the next 3 days?

- Practice more Linux commands
- Improve troubleshooting skills
- Learn more about services and logs
